HOMEWORK 2: INTRODUCTION TO RAILS

In this homework you will clone a GitHub repository ("repo") containing an existing Rails app called "RottenPotatoes", add a feature to the app, and deploy the result publicly on the Heroku platform. We will run live integration tests against your deployed version.

General advice

This homework involves modifying RottenPotatoes in various ways. Git (version control) is your friend. *Commit frequently* in case you inadvertently break something that was working before! This way, you can always back up to an earlier revision and/or easily compare what changed in each file since your last "good" commit.

Important for grading purposes

- Do not use JavaScript to implement any of the functionality required for this homework.

For each part of this homework, you will submit a text file containing a single line with the url of your Heroku deployment. The url will look like this: `http://your-app-name.herokuapp.com`
